DESIGNING A SUSTAINABLE TOURISM PROGRAMMES TO ACHIEVES NATIONAL GOALS

RACHELMCCAFFERY

Green Case Consulting
What is a sustainable tourism programme?

A planned approach to sustainable tourism using one or more set of internationally recognised sustainability standards

- **Criteria** e.g. GSTC
- **Certifications** e.g. Green Destinations, Preferred by Nature, Earth Check
- **Verifications** e.g. Booking.com's Travel Sustainable badge
- **Awards** e.g. World Responsible Tourism Awards
There are hundreds of sustainability certifications relevant to tourism around the world.

How can NTOs use them to achieve their country's aims?

There is no one size fits all approach when it comes to certification - use this to your advantage!
National programmes are being launched around the world

National sustainable tourism certification programmes add credibility and give destinations and businesses a closer link to effective promotion.
International recognition is very varied

</table>
There are many different approaches

1. Some destinations have developed their own programmes from scratch.
2. Others use the framework and criteria from existing standards to build their own national certification.
3. Some base their programme on recognition of a range of international certifications.
4. Others opt to work with the one scheme that best suits their needs.
Developing certification from scratch

- Time consuming and costly
- Existing certification programs have sophisticated reporting software refined over decades
- Obtaining globally recognised status takes many years
- International certifications can be white-labelled and tailored to the needs of any destination
- Using international certifications can still support jobs and growth
Designing a programme to meet national priorities
Destination positioning

- Adds credibility for destinations presenting themselves as clean and green
- It has helped destinations differentiate and put a little known destination on the map.
- Additional tourism products can be developed.
Sustainable Development

- Encourages communities to come together to develop sustainability solutions
- Builds cohesion
- Programmes can be designed so that destinations drive business sustainability
Promoting business sustainability

- International certification can be used as a shortcut to evidence sustainability achievements by businesses.

- They can then be pulled together and promoted under one national programme.

- Easier for consumers to find.
Meeting priority goals e.g. climate

- International criteria / standards can be upweighted or supplemented with others that support national goals
- Climate mitigation, adaption planning and habitat protection could all be emphasised to boost for example, disaster preparedness
- Some standard focus on specific issues e.g. plastic reduction
Supporting Specific Sectors

- Adoption of international standards can be quite flexible as long as core requirements are met.
- Programme can be designed and positioned around cultural and community tourism assets.
- Putting international standards at the heart of community tourism will result in a more balanced programme.
Meeting stakeholder priorities

- MCDA (Multi Criteria Decision Analysis) can be used to identify which certifications are a best fit against the priorities identified by stakeholders.
Factors to consider

1. What does the programme need to achieve?

2. Depth vs Breadth: How robust does the programme need to be?

3. What kind of resources are available to develop and then manage things?
A sustainable tourism framework and strategy will support achievement of the goal above and align activity in the pillars beneath.

**National sustainable tourism plan**

- LOCAL BUSINESS AND SME SUPPORT
- COMMUNITY DEVELOPMENT ACTIVITIES
- CLIMATE MITIGATION AND ADAPTATION
- BIODIVERSITY AND HABITAT PROTECTION

**Improving Standards**
- Tourism Certification

A certification programme needs to part of a wider national plan.
Designing a programme from scratch is resource intensive.

Use international standards as a strong but flexible base to build a bespoke programme.

Identify national priorities - ideally within a wider sustainability strategy.

Design a programme accordingly.

In Summary
